General Syllabus for Third-Cycle Studies in Environmental Science, MNMILJO1

This is a translation of the general syllabus approved in Swedish.

This syllabus was approved by the Board of the Faculty of Science on 30 May 2007 and most recently amended 18 December 2013. It applies to third-cycle students admitted from 1 July 2007.

1. Available degrees

The programme described in this syllabus can lead to one of the following degrees:

- Doctor of Philosophy in Environmental Science
- Licentiate of Philosophy in Environmental Science

In consultation with the Faculty of Engineering/LTH, the Faculty Board has decided (NA35 643/2005) that students admitted to third-cycle studies at the Faculty of Science on the basis of an MSc in Engineering shall be entitled to be awarded the degrees of Doctor of Philosophy in Science or Licentiate of Science without special application.

2. Subject description

Environmental Science is the scientific discipline addressing anthropogenic environmental problems, including the issue of climate change. The research conducted deals with human impact on natural processes and with the measures and strategies available to prevent, combat or counteract local, regional and global environmental problems. The discipline also comprises studies of how environmental problems affect the sustainable exploitation of the environment.

Environmental Science presupposes a basic understanding of natural processes and is therefore based on traditional science subjects such as biology, chemistry, physics, geology and physical geography. The discipline is interdisciplinary in character, addressing not only human impact on the environment but also relevant measures and strategies, so the research conducted is based on collaboration across departments and faculties.
The key research areas of the discipline are:

- the spread, transformation and deposition of chemical substances in air, soil and water, and their impact on humans, other organisms and the ecosystem
- anthropogenic impact on land and landscapes and its consequences for biodiversity and the climate, and for the potential for sustainable forestry and agriculture and other human exploitation of nature
- the environmental costs of human exploitation of energy and natural resources, and strategies for achieving sustainable use
- strategies, technical solutions and other measures to prevent the emergence of environmental problems or to counteract existing environmental problems, including climate change.

Research in Environmental Science is about both a fundamental understanding of the emergence of environmental problems and the contribution of documentation for long-term sustainable development of society. Consequently, research is often conducted in close cooperation with stakeholders.

The current research areas are described at the website of the Centre for Environmental and Climate Research www.cec.lu.se.

3. Objectives

Third-cycle courses and study programmes shall be based fundamentally on the knowledge acquired by students in first- and second-cycle courses and study programmes, or its equivalent. In addition to the requirements for first- and second-cycle courses and study programmes, third-cycle courses and study programmes shall develop the knowledge and skills required to be able to undertake autonomous research.

The third-cycle programme in Environmental Science aims to train research students to be able to conduct research of a high standard and work within higher education or the private or public sectors with advanced tasks requiring research experience.

On completion of the programme, the third-cycle student is to have acquired

- systematic and specialised knowledge of the national and international field of Environmental Science, enabling the development and use of ideas and theories in a research context or for methodological development
- the ability to formulate, plan and carry out a research process that provides significant analysis and understanding of environmental problems within a certain area
- the ability to apply an interdisciplinary approach to the analysis of research issues within Environmental Science
- the ability to make assessments based on critical analysis, evaluation and synthesis of new and complex ideas
- the ability to apply research ethics
- the ability to communicate, in speech and writing, conclusions, methods and theories of the impact of environmental problems and solutions to them within his or her area of expertise to the international research community and society at large
– the ability to promote environmentally sustainable development in academic and other professional contexts.

The general outcomes for third-cycle courses and study programmes are defined in the Higher Education Ordinance Annex 2 Qualifications Ordinance.

3.1. Outcomes for a degree of Doctor

Knowledge and understanding
For the degree of Doctor the third-cycle student shall
– demonstrate broad knowledge and systematic understanding of the research field as well as advanced and up-to-date specialised knowledge in a limited area of this field, and
– demonstrate familiarity with research methodology in general and the methods of the specific field of research in particular.

Competence and skills
For the degree of Doctor the third-cycle student shall
– demonstrate the capacity for scholarly analysis and synthesis as well as the ability to review and assess new and complex phenomena, issues and situations autonomously and critically
– demonstrate the ability to identify and formulate issues with scholarly precision critically, autonomously and creatively, and to plan and use appropriate methods to undertake research and other qualified tasks within predetermined time frames and to review and evaluate such work
– demonstrate through a thesis the ability to make a significant contribution to the formation of knowledge through his or her own research
– demonstrate the ability in both national and international contexts to present and discuss research and research findings authoritatively in speech and writing and in dialogue with the academic community and society in general
– demonstrate the ability to identify the need for further knowledge and
– demonstrate the capacity to contribute to social development and support the learning of others both through research and education and in some other qualified professional capacity.

Judgement and approach
For the degree of Doctor the third-cycle student shall
– demonstrate intellectual autonomy and disciplinary rectitude as well as the ability to make assessments of research ethics, and
– demonstrate specialised insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used.

3.2. Outcomes for a degree of Licentiate

Knowledge and understanding
For a Degree of Licentiate the third-cycle student shall
– demonstrate knowledge and understanding in the field of research including current specialist knowledge in a limited area of this field as well as specialised knowledge of research methodology in general and the methods of the specific field of research in particular.

**Competence and skills**

For a Degree of Licentiate the third-cycle student shall have:

– demonstrate the ability to identify and formulate issues with scholarly precision critically, autonomously and creatively, and to plan and use appropriate methods to undertake a limited piece of research and other qualified tasks within predetermined time frames in order to contribute to the formation of knowledge as well as to evaluate this work

– demonstrate the ability in both national and international contexts to present and discuss research and research findings in speech and writing and in dialogue with the academic community and society in general, and

– demonstrate the skills required to participate autonomously in research and development work and to work autonomously in some other qualified capacity.

**Judgement and approach**

For a Degree of Licentiate the third-cycle student shall

– demonstrate the ability to make assessments of ethical aspects of his or her own research

– demonstrate insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used, and

– demonstrate the ability to identify the personal need for further knowledge and take responsibility for his or her ongoing learning.

**4. Admission requirements**

The requirements for admission to third-cycle courses and study programmes are that the applicant meets the general and specific entry requirements that the higher education institution may have laid down, and is considered in other respects to have the ability required to benefit from the course or study programme.

**General admission requirements**

A person meets the general entry requirements for third-cycle courses and study programmes if he or she:

1. has been awarded a second-cycle qualification, or

2. has satisfied the requirements for courses comprising at least 240 credits of which at least 60 credits were awarded in the second cycle, or

3. has acquired substantially equivalent knowledge in some other way in Sweden or abroad.

The head of department may permit an exemption from the general entry requirements for an individual applicant, if there are special grounds.
Transitional provision: Those who meet the general admission requirements for doctoral programmes before 1 July 2007 will also be considered to meet the general admission requirements for third-cycle courses and study programmes until the end of June 2015.

If a specific number of credits or a qualification from previous first- or second-cycle courses and study programmes are required for admission to third-cycle courses and study programmes, those with corresponding credits or qualifications from undergraduate programmes awarded before 1 July 2007 will also be eligible.

Specific admission requirements
To be admitted to the third-cycle programme in Environmental Science the student must have passed an independent project (e.g., degree project) of at least 30 credits in a relevant subject and have good oral and written proficiency in English.

Equivalent knowledge acquired through corresponding programmes will be assessed individually.

In order to enable interdisciplinary initiatives and important specialisations in certain areas, students with qualifications in subjects other than Environmental Science may be considered for admission.

5. Selection
In selecting between applicants who meet the requirements, their ability to benefit from the course or study programme shall be taken into account. However, the fact that an applicant is considered able to transfer credits from prior courses and study programmes or for professional or vocational experience may not alone give the applicant priority over other applicants.

The following selection criteria will be applied:

Study record from undergraduate and Master’s courses or the equivalent. The breadth, depth and relevance of undergraduate and Master’s courses or the equivalent. The quality of the degree project and other independent work.

Other knowledge and skills of relevance to the research specialisation.

Suitable candidates should be called to an interview, if possible.

The recruitment and selection to third-cycle studies must always take diversity and gender balance into account, in compliance with the Lund University gender equality policy, equal opportunities policy and diversity plan. The underrepresented gender should always be given precedence in cases of equal qualifications, unless there are valid reasons to the contrary.

6. Degree requirements
The completion of the third cycle programme results in a degree of Doctor of Philosophy or, if the student so wishes or if this is stated in the admission decision, a degree of Licentiate. The student may also but is not obliged to complete a degree of Licentiate as a stage in the third-cycle programme.
The degree of Doctor comprises 240 credits and the degree of Licentiate 120 credits.

For a degree of Doctor or Licentiate the research student must have successfully completed a PhD or Licentiate thesis and passed all courses and other components specified below. The head of department (or person to whom the task has been delegated) is to check and determine if all the formal requirements of a degree of Doctor or Licentiate have been satisfied.

6.1. Thesis

The programme is to include a research project documented in a PhD or Licentiate thesis. The thesis is to be defended orally at a public defence and reviewed by a faculty examiner (opponent).

*PhD thesis*

The PhD thesis is to comprise 180 credits.

The PhD thesis can be designed as *compilation thesis* or as a *monograph*.

A compilation thesis consists of copies of a number of research articles or manuscripts and a summarising chapter. The articles may be written by the doctoral student individually or in cooperation with others, but the summarising chapter must be written individually by the doctoral student. The research articles must be of a quality required for publication in recognised peer-reviewed journals and it must be possible to determine the contributions of different authors. The summarising chapter is to consist of an introduction to the research area of the thesis and a presentation and discussion of the findings of the articles. The presentation and discussion shall be written in a form and style that is independent and different from the articles. This makes it possible to situate the findings in a wider context.

A monograph thesis is a unified report including descriptions of the research issue, research questions, methods, analysis, findings and discussion.

*Licentiate thesis*

The Licentiate thesis is to comprise 90 credits.

The Licentiate thesis can be designed as a summary of at least one research article (or manuscript), written by the student individually or in cooperation with others, or a unified research report (monograph). The thesis must be of a quality required for publication in recognised peer-reviewed journals and it must be possible to determine the contributions of different authors. For more information on summary and monograph theses, please see compilation thesis and monograph thesis above.

6.2. Courses and other programme components

The courses and other components of the third-cycle programme in Environmental Science are to comprise 60 credits for a degree of Doctor and 30 credits for a degree of Licentiate.
The required courses and other components can be offered at Lund University or at other higher education institutions. The head of department (or person to whom the task has been delegated) determines the number of credits that can be transferred from courses and other components offered at other faculties or higher education institutions. The courses included in the third-cycle programme are as far as possible to be specified in the individual study plan. In order to ascertain both disciplinary breadth and expertise, the selection of courses and reading is to comprise broadening courses, specialisation courses and methodology courses.

**Compulsory courses**

An introductory course to research studies of at least 1.5 credits, of which 0.5 credits is for all doctoral students at the Faculty of Science. Introduction to teaching methods (compulsory for doctoral students who teach) (3 credits). Introductory paper and discussion seminar (7.5 credits).

**Other courses and components**

- Broadening courses and reading in subjects of general relevance to Environmental Science. For a degree of Doctor, the requirement is at least 22.5 credits including no more than 15 credits for reading. For a degree of Licentiate, the requirement is 15 and 7.5 credits respectively.

- Specialisation courses and reading in the area of the thesis project. For a degree of Doctor, the requirement is at least 15 credits including no more than 7.5 credits for reading. For a degree of Licentiate, the requirement is 7.5 credits.

- Methodology courses dealing with key methods for the thesis project (including the introductory course to research studies and the Introduction to teaching methods). For a degree of Doctor, the requirement is at least 15 credits and, for a degree of Licentiate, at least 7.5 credits.
